

Documentation:-

1.About Project:-

In this project, we are working under Nykaa Fashion. Our aim is to provide virtual trial room of Jewellery . We have worked to provide similar condition in this filter. We have used script with Native UI picker and added Nykaa store image as background.

2.Source of Assets:-

We have used all the free resources having no copyright issues. Some resources are edited as per our convenience by us.

i. www.free3d.com

ii. www.sketchfab.com

Background from google images and further photoshop by us.

3.Occlusion and Face Tracker:-

We have used Occlusion to hide assets overlapping with face. Face tracker is used to provide proper position of assets.

4.Script:-

We have used Native UI picker using script and neck tracking.

5.New Update Features(Coming Soon)

We will try to zoom the assets when user taps on it.With this feature, user will able to see the product close to real look.

In this update, we will also work on, A filter contains all the assets and when user tap on any object, it will hide. With this, User can experience either buy single jewellery or the whole set as per their convenience look. This will help to boost the industry as per the demand of supply will increase. If User likes any single jewellery from set of jewellery, user can try and order any single jewellery from the set of jewellery which was not possible previously.
